Project Requirements

Tableau Sales & Customer Dashboards

Requested by Sales managers · Executives **Platform** Tableau **Dashboards** Sales · Customers

Build two dashboards in Tableau that help the stakeholders, the sales managers and the executives, analyze the sales performance and the customers.

Sales Dashboard

Purpose

Present an overview of the sales metrics and trends, to analyze the year-over-year sales performance and understand the sales trends.

Key Requirements

- **KPI Overview**: Display a summary of the total sales, profit and quantity for the current year and the previous year.
- **Sales Trends**: Present the data of each KPI by month, for the current year and the previous year. Make the months with the highest and the lowest sales easy to recognize.
- **Product Subcategory Comparison**: Compare the sales of the product subcategories in the current year and the previous year, and compare the sales with the profit.
- **Weekly Trends for Sales & Profit**: Present the weekly sales and profit of the current year with the average weekly values. Highlight the weeks above and below the average.

Customer Dashboard

Purpose

Provide an overview of the customer data, trends and behaviors, so the marketing teams and the management understand the customer segments and improve customer satisfaction.

Key Requirements

- **KPI Overview**: Display a summary of the total number of customers, the total sales per customer and the total number of orders for the current year and the previous year.
- **Customer Trends**: Present the data of each KPI by month, for the current year and the previous year. Make the months with the highest and the lowest sales easy to recognize.
- **Customer Distribution by Number of Orders**: Show how the customers are distributed by the number of orders they placed, for insights into customer behavior, loyalty and engagement.
- **Top 10 Customers by Profit**: Present the 10 customers who generated the highest profit, with their rank, number of orders, current sales, current profit and last order date.

Design & Interactivity (both dashboards)

Dashboard Dynamic

- Let the users check the historical data by selecting any year.
- Let the users move between the two dashboards easily.
- Make the charts interactive, so the users can filter the data by clicking on a chart.

Data Filters

- **Product**: category and subcategory.
- **Location**: region, state and city.
